Gravity Music™

A06 Music with Gravity

Application Concept

Gravity Control™ is a prototype of a new generation interface for searching, sorting and managing large amounts of data from different sources. Gravity Control™ will rock your music world by offering numerous options for music and music video management, artists continuously updating database, lyrics, etc.

The Gravity Control™ added value/contribution

The world of music industry is limitless today. There are a few music applications on the leaderboard but none of them could realize the potential that Gravity Control has in this area.

The Gravity Control™ interface is extremely suitable for music operations. Listening to music, watching music videos, creating playlists and obtaining additional information about artists/albums/songs are just a few of the many capabilities of Gravity.

New depth of music collections and playlists

In Gravity Control™ the user can experience a new depth of analyzing, sorting, knowing, accessing, browsing, operating with their music.

Social Networks Penetration

Gravity Control™ being implemented in any type of music product will bring a new way of penetrating the social networks and therefore increasing brand awareness, promotion, sales and profits.

There are various operations that can be specifically customized to meet the needs of the particular application and thus insure a marketing boost by matching users' musical preferences and by not being a spam.

Possible Data Sources

- Youtube
- Last.fm
- Spotify
- iTunes
